

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, October 19, 2010 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (62 new fires)
 New large fires: 0 (*)
 Large fires contained: 2
 Uncontained large fires: ** 1
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 1

Nationally, there are 53 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 3)

New fires: 3
 New large fires: 0
 Uncontained large fires: 1
 Type 2 IMTs committed: 1

Wrangler, Kisatchie NF. IMT2 (Quesinberry). Twenty miles southwest of Natchitoches, LA. Southern rough, pine and hardwood timber. Moderate fire behavior. Structures threatened.

The Crippled Chinook, National Forests in Mississippi. Previously reported incident. Six miles southwest of New Augusta, MS. Southern rough. Active fire behavior. Military training site threatened. Last report unless significant activity occurs.

KLR – Klamath Marsh NWR

Predictive Services Discussion: Low relative humidity will continue over Florida today. Scattered showers and thunderstorms are expected from the Southern Plains to the Mississippi River. A low pressure system off the southern California coast will bring scattered showers and thunderstorms to much of the southwest quarter of the country.

Today's discussion is from "This Day in History"

"Lessons Learned" serve as brief summaries of powerful learning opportunities. You can use these summaries as a foundation and launch point for further dialogue and discussion. Apply these lessons learned to yourself, your crew, and your unit.

The Pepper Hill Fire – 1938 – Pennsylvania

Incident Summary: Most of north-central Pennsylvania had been extensively logged by large timber companies from 1890-1930. By 1938, fuels in the area consisted of very young second-growth hardwoods, ericaceous shrubs and logging slash. Following an unusually hot and dry summer, a killing frost on October 7th caused the foliage to cure. Precipitation for the past three months had been substantially below normal. High temperatures persisted in the 80's with RH's of 20-25%.

At 11:10am on October 19, 1938, the Hunts Run Civilian Conservation Corp (CCC) Camp #S-132 is notified of a possible forest fire. Upon investigation, several fires are located on Pepper Hill Mountain. 2 CCC crews are dispatched to the fires. Both crews had just returned from a fire only hours before, and many enrollees requested to stay behind due to fatigue. All enrollees were ordered to go. The two CCC crews began initial attack from both flanks of the fire, anchoring into a nearby road. Both crews began constructing line from the heel of the fire to the top, burning out as needed. For reasons which are still not clear, crew 2 was ordered to abandon their firing operation on the right flank and proceed to the head of the fire to construct direct downhill line. The crew was $\frac{3}{4}$ of the way up Pepper Hill Mountain when the fire below made a rapid run that overtook them. A few were able to find safety atop large nearby rocks, the remaining crew was severely burned, and ultimately eight of the young CCC enrollees would lose their lives.

Lessons Learned Discussion Points

Training – Most of the CCC enrollees received little or no formal training. They were expected to learn what to do on the job.

- Most of us will work with new firefighters who have little or no experience. It is not reasonable or safe to assume they will learn everything on the fireline. How will your crew prepare new members for success?

Fatigue – Many of the enrollees assigned to the Pepper Hill Fire had just returned to camp from other fires at 5:30am that morning.

- Though we now have work/rest guidelines to help prevent fatigue, a long fire season can still take its toll on even the fittest firefighter. What signs might we see in our crewmembers that could indicate fatigue? (IRPG pgs x-xi)
- What impact can fatigue have on your crew, and what can you do to lessen the associated risks?

Tactics – The original plan to use the road as an anchor point seems sound, but poor choices were made on the right flank when the crew moved to the head and abandoned their burnout.

- Without aviation support, would your crew engage this fire? If so, how?
- Though not a sound decision at Pepper Hill, describe conditions where attacking the head of a fire could be a viable tactic, while ensuring safety.

Crew Cohesion – The CCC Enrollees had not worked many fires together. On their way up the hill, they became separated due to differences in physical ability.

There were no indications that their crew leader gave them any direction during this critical time.

- No firefighter intends to get into a bad situation. We all train to avoid them, but "what if"? How would you and your crew manage the safety of all firefighters if faced with a similar situation?
