

**Incident Management Situation Report
Friday, October 31, 2025 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (October 24, 2025 – October 30, 2025):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (294 fires)
New large incidents:	4
Large fires contained:	3
Uncontained large fires:	1
CIMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

[Understanding the IMSR](#)

[IMSR Map](#)

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Active Incident Resource Summary

GACC	Incidents	Cumulative Acres	Crews	Engines	Helicopters	Total Personnel	Change in Personnel

TOTAL FIRES:		2,952	2,144	213	418	45,210	6,315	57,252
TOTAL ACRES:		201,820	1,518,080	34,154	109,189	1,895,785	1,106,328	4,865,357

Ten Year Average	Quantity
Fires (2015 – 2024 as of today)	50,511
Acres (2015 – 2024 as of today)	6,921,094

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

A weak atmospheric river will move into the Northwest this weekend, with the heaviest rain in western Washington and light to moderate precipitation for Oregon and the northern Rockies. Breezy and dry westerly downslope winds will occur ahead of the associated cold front across north-central and northeast Montana, as well. Upper-level ridging will remain over the Southwest and southern California bringing above normal temperatures and minimum relative humidity of 7-20% and areas of poor overnight recovery. The ridging over the southwestern US will persist into late next week, when another storm moves into the northwestern US with moderate precipitation and snow levels lowering to as low as 5,000 feet.

A drier pattern is expected across the eastern US from the Plains to the East Coast. Two primarily dry cold fronts will move through, one this weekend and a stronger front Monday and Tuesday next week. Most wetting precipitation with the front will occur in the Great Lakes and Northeast, with only isolated showers occurring elsewhere, if they occur. Breezy west winds are expected today and tomorrow across the central Appalachians to the Northeast, with another period of breezy northwest winds early next week. Minimum relative humidity will be generally above 30%, but very dry air is expected to move in behind the second front with minimum humidity as low as 15% in the central Appalachians mid-next week. A strong storm will bring heavy precipitation to Alaska's southern coast and panhandle this weekend, with periods of light snow for the Interior. Trade winds will continue across Hawai'i but briefly become weak Sunday into Monday as a cold front approaches with an increase in showers.
